The screenshot shows a Linux desktop environment. The main window is a text editor titled "DeDRM\_plugin\_ReadMe.txt" containing the following text:

Debug information will be written to the terminal window.

Copy the output from the terminal window.  
On Windows, you must use the window menu (little icon at left of window bar) to select all the text and then to copy it.  
On Macintosh and Linux, just use the normal text select and copy commands.

Paste the information into a comment at my blog, <http://apprenticealf.wordpress.com/> describing your problem.
